

Pipeline process

CircleCI monitors the main branch in the udagram repo. CircleCI is triggered when any change happens in the main branch and starts executing the pipeline steps.

The following are pipeline steps:

Spin up environment

Preparing environment variables

Checkout code

Install NodeJS 16.13

Install NPM

Install Yarn

Install AWS CLI - latest

Configure AWS Access Key ID

Setting Up Elastic Beanstalk CLI

node --version

frontend install

frontend build

backend install

backend build

backend deploy

frontend deploy
